F7 Share Market

The S&P/ASX 200 is used for all data except for the 'market capitalisation of listed domestic equities' and the 'average daily turnover of equities'.

'S&P/ASX 200 Banks' index is based on S&P and Morgan Stanley Capital International's Global Industry Classification Standard (GICS) and excludes merchant banks and diversified financial institutions. The index is a subset of the 'S&P/ASX 200 Industrials' index.

The 'S&P/ASX 200 Industrials' index reflects all stocks in the S&P/ASX 200 that are not included in the 'S&P/ASX 200 Resources' index.

The 'S&P/ASX 200 Resources' index consists of stocks in the Energy GICS sector and the Metals and Mining GICS industry classification.

The 'S&P/ASX 200 Banks', 'S&P/ASX 200 Industrials' and 'S&P/ASX 200 Resources' are based at 5 July 2002 = 3215, the first date that all of these indices are available from. The base value is the value of the S&P/ASX 200 on that day.

'Share price indices' summarise movements in share prices resulting from trading on the ASX.

'Accumulation index' indicates the total pre-tax return from investments in listed shares after reinvesting dividends.

'Share price indices', the 'Accumulation index' and the 'Dividend yield' are calculated at end-month.

'Price/Earnings ratio' is the end of month price/earnings ratio. The series uses 12-month trailing underlying profits for S&P/ASX 200 companies. The data are based on free-float market capitalisation and sourced through Thomson Reuters.

'Market capitalisation of listed domestic equities' is calculated at end-month for all equities listed on the ASX Mainboard, including preference shares and excluding overseas-domiciled stocks.

'Average daily turnover of equities' is the value of monthly equities turnover on the ASX Mainboard, divided by the number of trading days in the month.
